## **NEW OFFERING - DOCUMENT SCANNING AND DATA CAPTURE**

Toronto, Ontario – January, 7 2008 - Cover-All has launched a new offering for Document Imaging Services. Our focus is to provide business-processing solutions to our clients with document and data intensive applications. We have an integrated suite of document management solutions and services to meet any document management requirements.

Mike Coverdale, President stated "Document Scanning and Data Capture is a natural addition to our existing service offerings that enhances our capabilities when managing our customer's data throughout the document life cycle. Many of our customer's have been requesting an electronic solution for their documents such as Health Care, Accounts Payable, Human Resource Records, Insurance Claims and Response Surveys. We are very excited to introduce this new service to our long time valued customers and continue to develop new partnerships".

Document scanning is the process of converting paper documents so that they can be managed and controlled by an electronic document management system. The task of storing, retrieving, sharing and compiling accurate up-to-date information is no longer a nice-to-have feature in today's business. It has become a pre-requisite for organizational survival in areas of compliance, the increased need for efficiency, privacy, risk management and backup and disaster planning.

Founded in 1966, Cover-All provides solutions for information technology services, including database management for 1-to-1 marketing, transactional processing for the financial and insurance sectors and managed IT services.

Cover-All is a leader in this business for over 40 years and has pioneered many new applications for companies in the Canada and US. From banking, insurance, to packaged goods, to virtually every business sector, Cover-All has earned a reputation for being an innovative, progressive company dedicated to providing timely cost effective and meaningful solutions.
